

COSWORTH

Maximize Profits with Cosworth Short & Long Blocks

Is your business maximizing profits and customer satisfaction when taking on engine build jobs?

It's not uncommon for the average shop to subcontract several of the engine machining/rebuild processes to various specialists. Relying on these specialists work/delivery schedules can often be frustrating, especially when the customer's car is taking up valuable work shop space – not to mention the customer service aspect of having to inform your customer of further unforeseen delays with the job.

The typical custom engine build utilizes parts sourced from various manufacturers. These various parts need to be ordered from different vendors (all with varying profit margins). This can cause further delays due to parts not being in stock, or because of shipping delays. From a technical standpoint, are all the performance parts used in the engine build compatible with each other? Are the clearances inspected and set to manufacturers recommendations by a professional engine builder who specializes in that particular engine type?

From a performance perspective; will this custom engine deliver the kind of performance and durability your customers are expecting? Will it help your shops reputation positively, or create a customer service nightmare? By the time the project is completed, how much profit is your business really making?

The Cosworth Advantage

Cosworth High Performance Short and Long Blocks offer many benefits compared to a custom engine build.

- Maximize your profits. Your profit margin on the engine is known before start of the project.
- Reduced down time for your customer car - Short/Long Blocks are in stock at Cosworth.
- Engines are expertly prepared and assembled by Cosworth staff, experienced in high performance race engine building, ranging from Formula 1 to Champ Car.
- All engines use premium matched Cosworth components, and are fully balanced.
- Only all new Genuine Factory castings are used. All new OE and Cosworth gaskets are used for assembly.
- Each engine setup has undergone countless hours of dyno and development time.
- Each engine is supplied with its own unique Cosworth Serial Number Plate.
- All engines are prepped and assembled in Cosworth's state of the art engine clean room.
- Customer retains original short/long block. No Core Exchanges necessary.
- **Available for Subaru WRX/STi (EJ25), Mitsubishi Lancer Evo (VII~X), and Nissan VQ35.**
